Introduction

We certainly live in interesting times. High tech makes amazing changes in seemingly familiar things. Inspired by this, we have prepared a presentation of a unique and promising in our opinion project.

> Blockchain is often called one of the most important technological breakthroughs of the 21st century. Many companies and corporations explore its possibilities and strive to keep up with the time.
>
> Cryptocurrencies, in turn, are gradually becoming part of our daily lives. Despite all the obstacles, they pave the way for a more perfect, efficient and transparent financial system.
>
> Mining is an innovative and unique method of issuing and distributing digital money.

Millions of people earn on mining today. However, despite enormous progress of the crypto industry and public recognition of cryptocurrencies, a lot of people have not yet heard about mining or are to scared to do it. Thus, a huge part of potential miners do not even know about the capabilities of their computer. Among other things, beginners are stopped by the difficulty in setting up, choosing coins and low financial efficiency. We clearly see this problem and have found a solution.

We bring you the first mining crypto lottery with equal opportunities for both large and experienced miners and people with an ordinary home computer. For the latter, WhiteStripe will become a guide in the world of crypto mining and will allow them to get acquainted with mining, without buying special equipment, in an interesting and convenient way.

Thinking about the start of the project, we carefully studied the market. Frankly speaking, we managed to find a couple of vaguely similar startups, however, judging by their condition, they have not left the stage of primary development. We will not talk about the annual growth of the gambling market and development of the industry as a whole once again. More importantly, we are confident that in the foreseeable future, all online casinos and lotteries will use blockchain and smart contracts as a guarantor of honesty, transparency and independence.

WhiteStripe team invites you to participate in the implementation and development of this project.

WhiteStripeLottery Advantages

Easy to connect:
Just fill out a simple registration form on our site and enter the data in your personal account.

Real chances:
Unlike online casinos and lotteries, our users will be able to track the process of formation and drawing of the Bank in real time, using the open blockchain.
Smart contract, in turn, will not allow anyone to influence the choice of the winner.

Daily payments:
Our winners, as well as the owners of the WhiteStripe Lottery Token (WSLT), receive payments at the end of each day. The former - from the raffled Bank, the latter - as an incentive for WSLT possession.

No need to leave home:
To get a ticket, just press one button in your personal account, and our service will automatically select the optimal mining algorithm in accordance with your equipment.

Exchange:
In the event that you want to participate, but do not have any computing power, you will have the opportunity to purchase tickets from other users on our internal exchange.

Stability:
Due to crypto market high volatility, it was decided not to create another coin, but to develop one on the basis of the production of the most famous and respected cryptocurrencies.

Easy to pick up the prize:
Players receive prizes in one of the most liquid and widespread cryptocurrencies - ETH.

Constant support and development of the marketing program:
At the heart of our project development is non-stop conduct of advertising campaigns, bounty programs and signing of mutually beneficial partnerships, in order to attract new users and promote the product.

No taxes:
Despite the fact that, part of the primary Bank is paid to investors, the absence of taxation compensates for this.
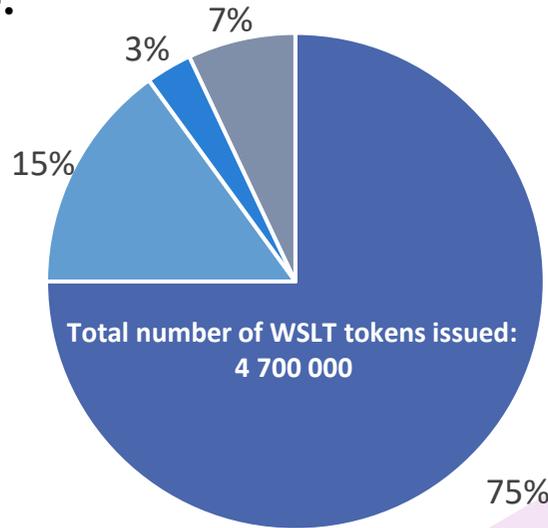

Openness to suggestions:
We are ready to work together with the community. Every idea suggested will be considered and, possibly, integrated into the platform.

Token, ticket

WhiteStripe Token. Issue, distribution, purpose.

Total number of WSLT tokens issued: 4 700 000

- 75% of WSLT will be available for purchase during three sales phases
- 15% of WSLT are assigned to the project team
- 3% of WSLT are assigned to advisors
- 7% of WSLT are reserved for the bounty campaign

Unsold tokens will be burned. Tokens, assigned to the team will be burned as well in proportional number. In order to avoid affecting the exchange rate, the team tokens will be frozen for 12 months after the last stage of the ICO.

For WSLT holders, there are daily incentives - 20% of the raffle Fund collected during the day will be distributed among them. The distribution of rewards occurs between wallets with 300 or more WSLT.

Ticket. Issue, distribution, purpose.

The number of tickets is not limited. All tickets issued are destroyed every 24 hours, immediately after the draw. Then the issue of new tickets begins.

One ticket is equal to 0.0001 ETH in the WhiteStripe draw Fund. Every player receives tickets, according to the performance of his/her video card/other equipment.

Tickets determine and record the contribution of each miner to the formation of the draw Fund and are used exclusively for operations within the platform.

How it works

Unlike other gambling projects, we will not form a Bank and jackpot from the funds collected during the ICO. We do not care what country you are from, we will not ask for a deposit or personal data. Instead, we offer an autonomous and self-sufficient system of draws. A system in which anyone has the opportunity to try their luck and win an impressive prize without spending a penny on a ticket. WSLT holders, in turn, receive rewards for owning tokens. To do this, by the way, they also do not have to do anything.

For example:

Each ticket is given a unique number. At the end of the day, all tickets without exception participate in the draw. If by the time of the draw, 1000 tickets will be issued (in fact, there will be much more), then Michael will have a chance of 0.8% to win the main prize, and Jack - 10%. Of course, in addition to the first, there are 99 smaller prizes.
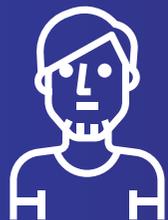

Michael

Uses his PC for mining → Mines for 10 hours with 25 mh/s → mines 0,008 eth for the shared fund → gets 8 tickets

Jack

Uses 2 rigs with 6 GPUs each for mining → Mines for 5 hours with 300 mh/s → mines 0,01 eth for the shared fund → gets 100 tickets

How it works

We have set a goal to completely get rid of the need and possibility of human participation in the key operations of the lottery. Smart contracts will perfectly cope with this task, performing such operations as: formation of the Bank, determination of winners, payment of prizes and incentives to WSLT holders, all of that - in a completely independent and automated mode.

The jackpot is formed from the daily lottery deductions and is drawn on the last day of each month. The chances of each participant will be calculated similarly to the daily lottery. Tickets accumulated during the day will be duplicated to participate in the jackpot. However, you need to mine c WhiteStripe for at least 72 hours in a calendar month.

Prize distribution

32%	20%	12%	7%	4%	10%	8%	7%
1st place	2nd place	3rd place	4th place	5th place	sharing 6th-10th places	sharing 11th-30th places	sharing 31th-100th places

Opportunities and prospects

We offer long-term, reliable cooperation to those who decide to help in the project development. A unique way to receive daily rewards - 20% of the collected Fund. At the same time, varieties of draws will be gradually introduced, unlike daily ones, limited not by time, but by the size of the Bank. The Bank will be formed on the same principle.

After the launch of the lottery and the formation of a community of players, we are not going to stand still and plan to expand the platform capabilities(see the Roadmap). A nice bonus for WSLT holders will be an additional income from any subsequent WhiteStripe brand projects in the amount of 30% of our fee.

Based on the project development plans, we expect to attract computing power proportional to 1.5% of the ETH network at the launch of the lottery, and the growth will continue. According to our calculations, miners bought only 10-15% of all video cards sold in the last 3 years. This opens up a huge potential. Our product will be a good way for people to get acquainted with the amazing world of cryptocurrencies and will contribute to the development of gpu mining for people who have never been interested in it. Of course, we are talking about gamers. Go to the movies or relax with friends and come back to find a few ETH on the account? It sounds good, besides just one click is enough to do it.

In addition to the advertising campaign, the user-friendly interface, the ability to purchase tickets from other lottery participants, further integration of new mining algorithms, including ASIC, will contribute to the increase in the number of users.

To sum up, we will not try to predict the growth rate of the WSLT rate. It is much more honest to assess the effectiveness of token ownership. For the accuracy of the calculations, we used the ETH exchange rate ($185) and the state of the ethereum network on 30.10.2019. Thus, presale participants, receiving a share of each Bank drawn, will double their investments within 8 months. Participants of the first and second stage of the ICO will do that in 10 and 12 months, respectively. On top of that there are factors that cannot be calculated mathematically. Such as distributing rewards only to wallets 300 WSLT or more, and burning of unsold tokens. Indirectly, this leads to a decrease in the number of tokens active for receiving rewards and to an increase in their profitability.

WhiteStripe Token sale
